

Data Centric Approach to Database Modernization Workshop

Overview

This facilitated workshop will consist of understanding the business and technical requirements for successfully planning and implementing a modernized database and application design using data centric principles.

Target Audience

- IT Personnel with database knowledge & responsibility; application developers

Why Use This Service?

- Is your legacy database & application design making it a challenge to meet new business requirements?
- Are you struggling to get better usage of the business data stored in your DB?

Benefits

- Access to expert consultants that can guide you in applying data centric design concepts to your current database and application
- Education on data centric modernization techniques and processes
- Modernized design that will enable more scalability and flexibility in the future.

Service Provided

- Review of current state, current requirements and future requirements for your database and applications
- Discussion of data access methods and architectures
- Education on data centric design principals and strategies for database modernization
- Discussion regarding the best approach for your database & applications and formulation of implementation steps.

Deliverables

- Detailed report summarizing discussions and finding – including high-level project plan detailing next steps for database modernization
