

IBM will provide up to 4 days, on-site, of DB2 Web Query DataMigrator installation, design, and implementation assistance. Activities will include:

- Verification of installation of the DB2 Web Query for IBM i software including DataMigrator
- Conduct a design workshop to establish ETL (extract, transformation and load) requirements, including identifying data sources and target
- Conduct (with client) a prototype of ETL process including creating of necessary metadata, data flows, and process flows, transformations over a sample of your data sources

Provide skills transfer through labs, workshops, and presentations such as:

- Meta Data (including working with dates)
- DataMigrator Fundamentals and Best Practices
- Data extract and load options
- Proper data modeling best practices
- Performance Considerations
- Incorporating DB2 functions, views or procedures
- Scheduling Process Flows
