

Db2 for i Row and Column Access Control (RCAC) Workshop

Overview

This facilitated workshop will consist of understanding the business and technical requirements for successfully implementing and maintaining a data governance solution with the Db2 RCAC technology. It will include a discussion and guidance on data access roles and responsibilities that meet your data security requirements.

Target Audience

- IT Personnel with database knowledge & responsibility; security administrators

Why Use This Service?

- Are your databases being required to store data from multiple locations or business units and limit data access at the same time?
- Are you trying to address a separation of duties requirement?
- Are you looking to implement RCAC without running into performance issues or leaving data access exposures?

Benefits

- Access to expert consultants that can guide you on the many subtle considerations that need to be addressed when implementing RCAC
- Education on best practices to ensure a high-performing RCAC solution

Service Provided

- Review of data governance and security requirements
- Discussion of current application and data access architecture and future application and data access plans
- Discussion of database user roles, responsibilities and separation of duties considerations
- Discussion of performance and throughput expectations
- Education on the Db2 RCAC technology and related Db2 for i topics
- Discussion of the final solution and formulation of the planning and implementation steps.

Deliverables

- Detailed report summarizing discussions and finding – including high-level project plan detailing next steps for RCAC implementation
