Latest Updates

Version = 1.1.8.4
Build date = April 2020
ESS Level = LCD8-2010-24

Here are a couple options for obtaining a no-cost version of Java:

<https://adoptopenjdk.net/>
<https://aws.amazon.com/corretto/>

1. Enhancements to Run SQL Scripts:

- SQL language and performance improvements to Content Assist.
- Content Assist preferences support, including description text and data type.
- Display timestamp of query in results window. (RFE 134636)
- Details... action added on query result. (RFE 134635)
- Option to Suppress Inquiry Messages. (RFE 140075)
- New entries in Insert from Examples for all new IBM i Services.

2. Enhancements to Database Schemas:

- SQL Weak Type support.
- SQL table comparison support.

3. Data Transfer Enhancements:

- Column heading and label options added to CLDOWNLOAD. (RFEs 138673, 138915)

4. Enhancements to 5250 Display and Print emulation:

- Compatible pasting of special characters from other Windows documents. See GettingStarted section 9.6.6 5250 Compatibility. (RFE 126146)
- Utility to generate the font-image file for User Defined Characters with PDT printing on a Windows workstation. (RFE 130267)
- Easier way to create a shortcut to a 5250 session. (RFE 132157)

Session Manager, File->Open Directory will open the location of the configuration files.

From there, a shortcut or alias can be manually created.

- Option on Print Screen Setup to set column separators. (RFE 128192)
- Capability to reorder a print screen collection. (RFE 114927)
- Option to "Disable the popup keypad menu". (RFE 140004)
Available at 5250 Session Manager-->Tools-->Customize Menu Bar...
- Allow "Yen" and "Backslash" at the same time. (RFE 132374)
- Maintain selection in 5250 Session Manager when a 5250 session exits.

(RFE 131959)

- Option to save screen images from a Screen History Archive.

(RFE 123233)

5. Open Source Package Management (OSPM) Enhancements

- Install RPM-based open source packages on an IBM i partition not connected to the internet.

An SSH tunneling option allows internet access to the RPM repository through the connected workstation.

- Maintain a list of recently used locations. (RFE 138815)
- Clear Metadata... action added to Utilities.

6. Enhancements to System Configurations:

- Features that leverage SSH connections (eg OSPM, SSH Terminal) can configure a different port at System Configurations->Connection. (RFE 140483)

- Button on System Configurations Console tab to verify connections (RFE 128193)

7. Other General Enhancements:

- Splash screen displays until first panel appears. (RFE 139134)
- Several most-recently-used lists have been added (RFE 89715)
- Access the internet from an SSH Terminal on an IBM i partition not connected to the internet.

See the HttpProxyUI plugin in GettingStarted.

Recommended Java Level: Java 8 Update 191 or higher

-
1. Enhancements to Run SQL Scripts:
 - "for update" now allows results to be updated (RFE 89794)
 - Ability to select text from within a result cell (RFE 91124)
 - Support for displaying name and label at the same time (RFE 98618)
 - Support for changing column headings in current results (RFE 108357)
 - Support for column customization in current results (RFE 125506)
 - Refresh option to update current results (RFE 108617)
 - Many new Insert from Examples
 2. Enhancements to Database Schemas:
 - Specifying a system name is supported when creating a new schema
 - Improvements to Tables->Work with->Related Objects
 - Added support for changing Aliases, Row Permissions, and Column Masks
 3. Enhancements to SQL Performance Center:
 - Support for filtering Performance Monitors, Plan Cache Snapshots, and Plan Cache Event Monitors.
 4. General DB Enhancements:
 - Added File->New Window to Schemas and SQL Performance Center for selecting a different system (RFE 119563)
 5. Enhancements to 5250 Display and Print emulation:
 - Allow keyboard buffering to be turned off (RFE 91890)
 - Allow variables in Print Screen Header and Footer (RFE 92158)
 - Migrate kerberos setting from Access for Windows to ACS (RFE 122787)
 - Enable margin setting for 5250 print emulation when Use Java Print Service is specified (RFE 122569)
 6. Enhancements to Data Transfer:
 - Custom tab names for Excel download (RFE 112968)
 - UTF-8 support for Dos Random file type (.dsr)
See additional information below for incompatibility with previous versions

7. Other General Enhancements:

- Installation scripts for Windows check for compatible version of Java

Attention: Users of Data Transfer:

This update includes changes that make Data Transfer downloads and uploads using the Dos Random format (.dsr) incompatible with previous versions unless you take the actions outlined below. Other file formats (.csv, .txt, .xlsx, .ods, etc) are not affected. The default File Encoding for Data Transfer downloads and uploads is UTF-8. The File Encoding determines how the downloaded data is formatted within the .dsr file. Previous versions of ACS were not correctly formatting a DosRandom file format when a UTF-8 encoding was specified. Instead, the DosRandom file format was always being formatted according to a US-ASCII encoding. Any saved Data Transfer request files (.dtfx, .fdfx, .dttx) likely have the encoding as UTF-8 (which would be incorrect since the encoding for dsr files was always US-ASCII).

Because it is necessary to support characters which cannot be represented by US-ASCII, this update will honor the FileEncoding as specified. That means if you want to continue to use the US-ASCII format, you will need to make the following changes:

1. For new download requests, visit the Details panel and change the "Translate system data to" to US-ASCII. The default is UTF-8.
2. If you have saved Data Transfer download requests (file type dtfx and fdfx) for Dos Random, you will need to change the FileEncoding property from UTF-8 to US-ASCII.
3. If you have saved Data Transfer upload requests (file type dttx and fdfx) for Dos Random, you will need to change the FileEncoding property from UTF-8 to US-ASCII.
