

IBM Content Manager OnDemand

SQL Server Setup Notes

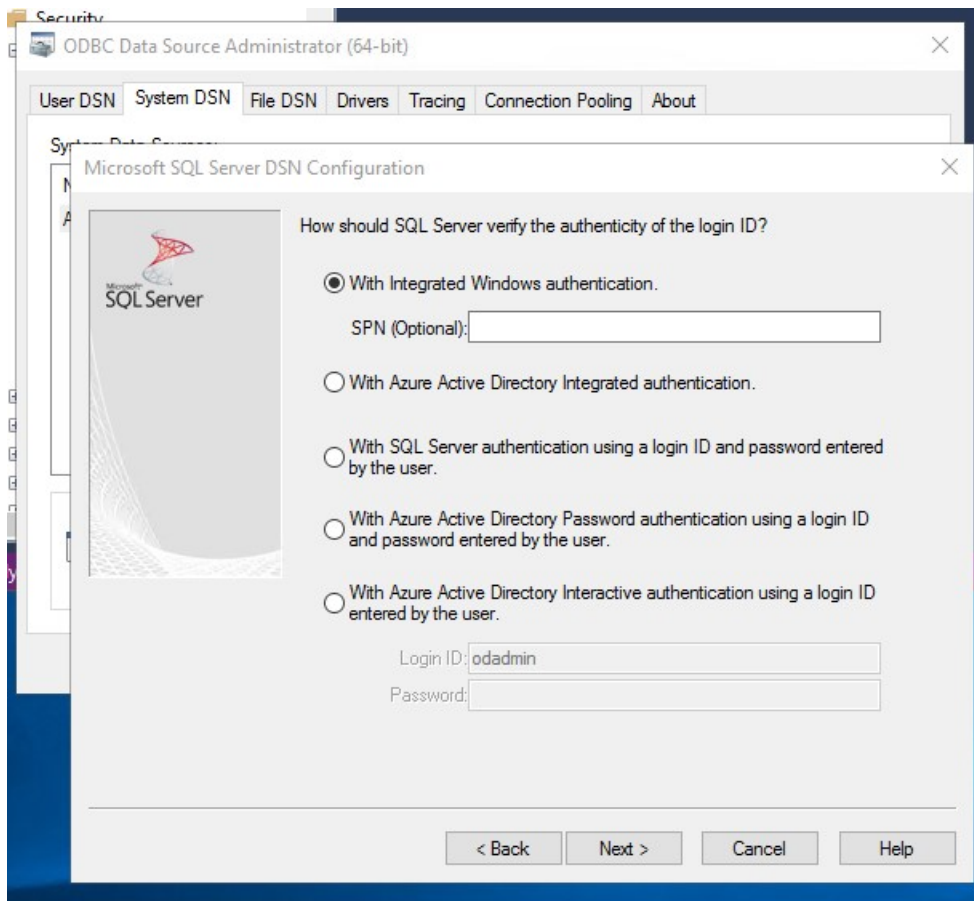

1/12/2021

Ben Boltz

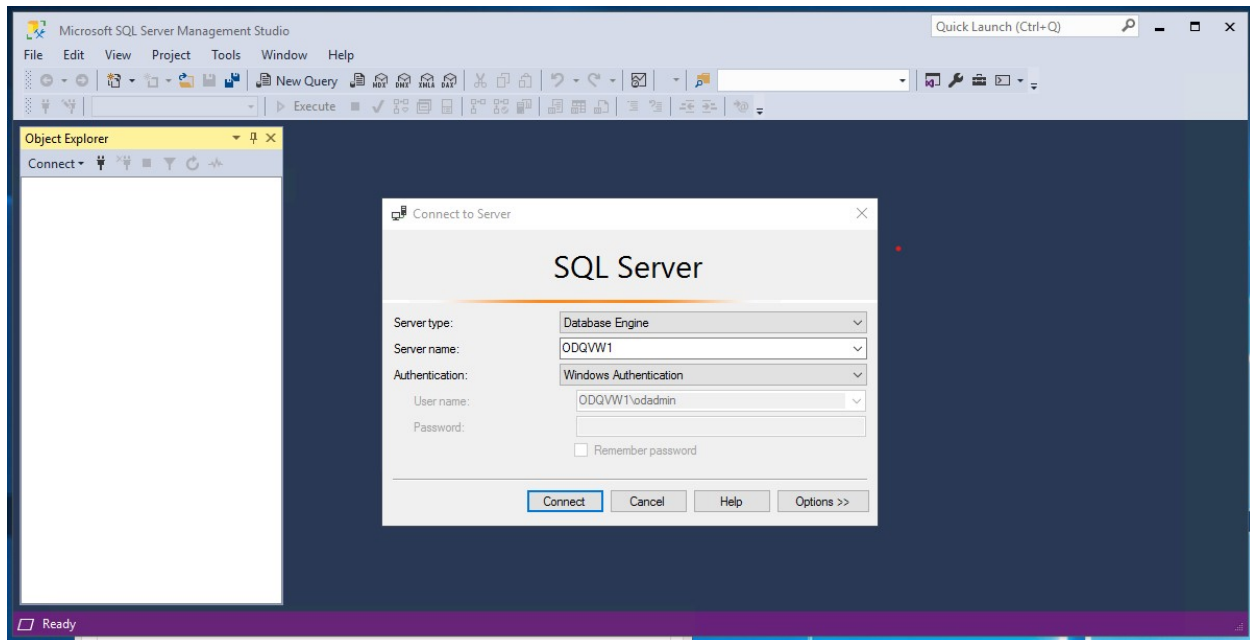

Software Engineer - Content Manager OnDemand

The ODBC System DSN should be configured to use Integrated Windows authentication:

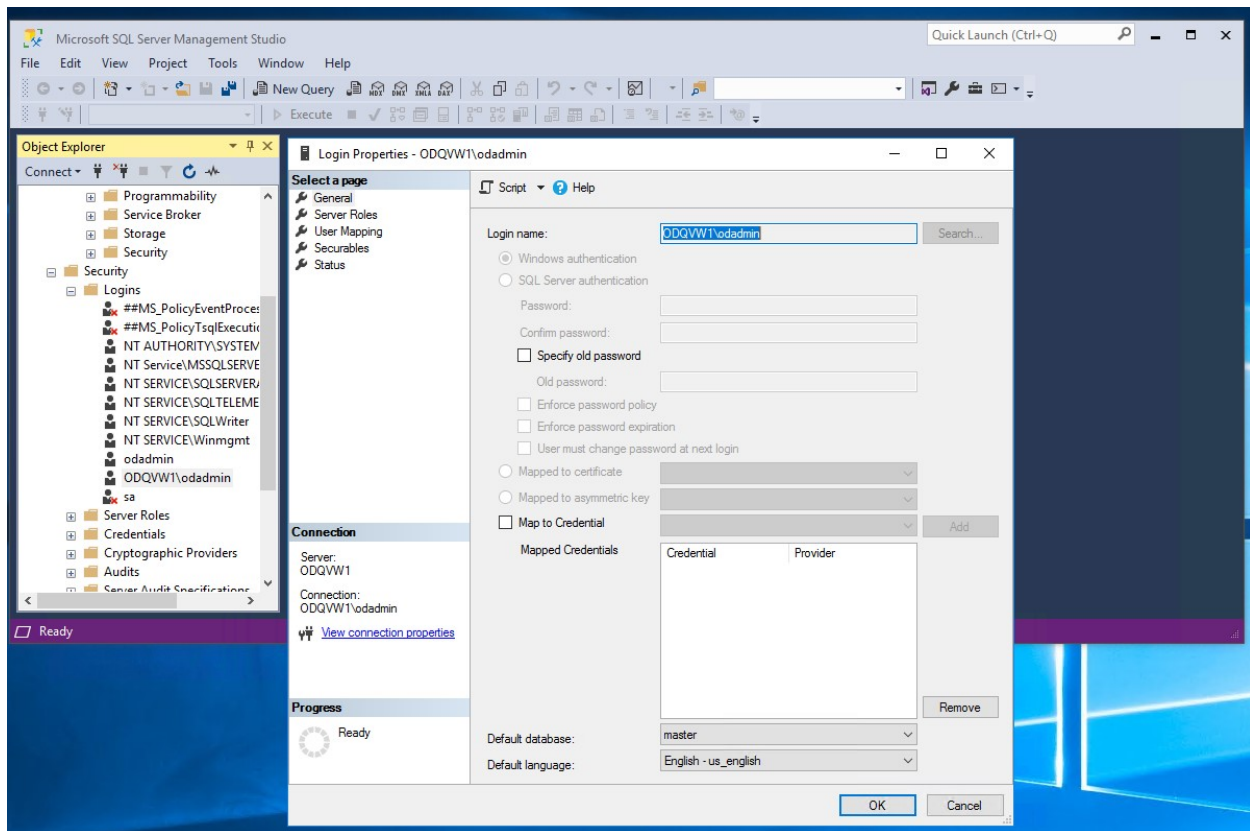

Integrated Windows authentication is required because the Content Manager OnDemand server is using an Integrated Windows authentication ID to login to SQL Server.

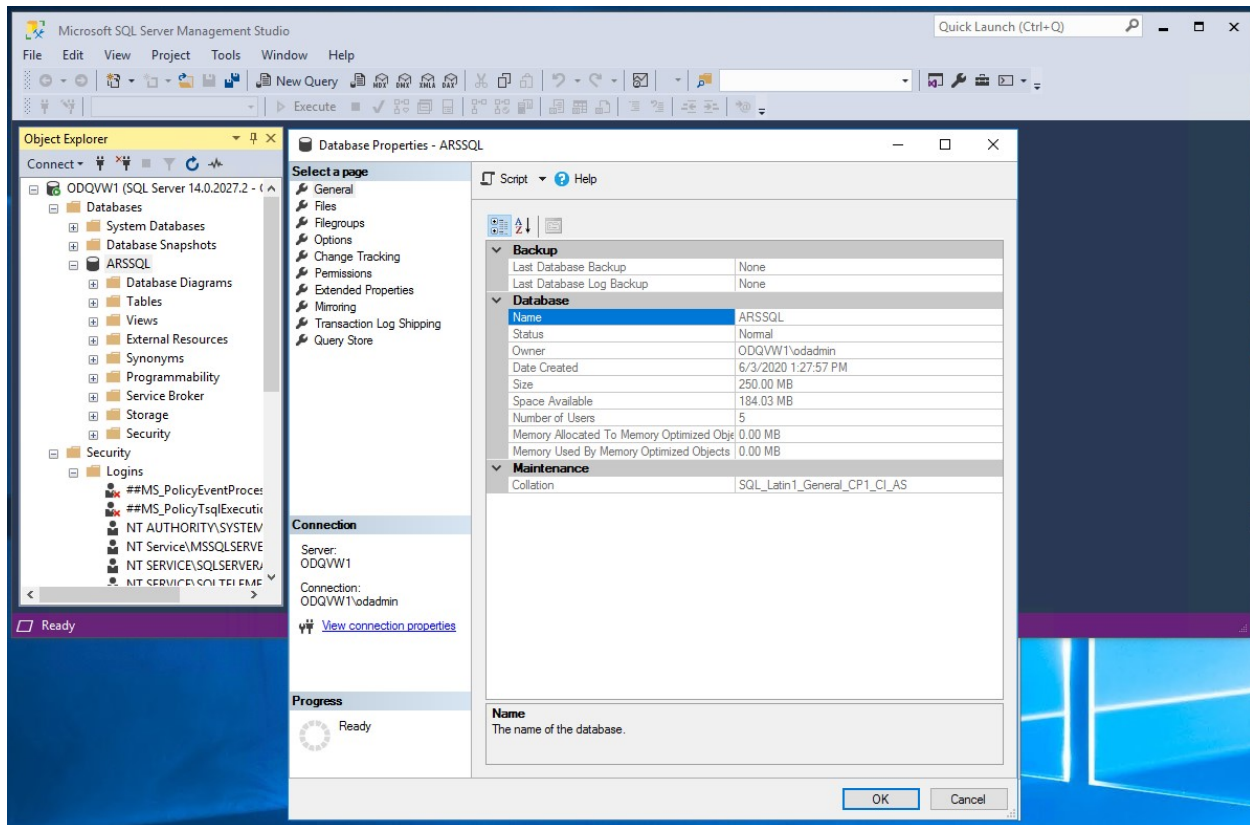

You will need to use the Windows ID <domain>\odadmin, created when you installed SQL Server, for Content Manager OnDemand to log into SQL Server. This ID is created by default when SQL Server is installed for the user that installed SQL Server. In some cases, customers erroneously install the software with Administrator instead of odadmin. This approach will not work.

The graphic below shows the Properties for the Integrated Windows user ID.

The graphic below shows the Properties for the database. Note the owner is the Integrated Windows ID.

The graphic below shows the Properties for the schema owner.
