

IBM Planning Analytics 2.0.9.7 LC - Fix List

| Component | APAR | Description |
|-----------|--------------------------------|---|
| Server | <u>PH29558</u> | Local server (pdata) cannot be started from Architect and Perspectives 32-bit clients because of missing ngtm1api.dll |
| | <u>PH30784</u> | Server crash on startup due to corrupt feeder |
| | <u>PH32838</u> | Planning Analytics Workspace: rule values other than zero are shown as zero on n-level when hierarchies are involved |
| | <u>PH34204</u> | Error using DimensionElementComponentAdd() when the element name exists in a hierarchy created on the same dimension |
| | <u>PH35173</u> | TM1 server crashed due to OS function report_gsfailure when it tried to report SQLAPI error |
| | <u>PH35287</u> | Rule calculations referencing alternate hierarchy take unexpectedly long time even with feeders |
| | <u>PH35895</u> | TM1 server crash caused by null pointer in collection - col_checkdeletealias |
