IBM Planning Analytics Engine 12.0.1 - Fix List

Component	ID	Description
Planning Analytics Engine	TM1-379	Native view with customer model is 17% slower than v11 due to LogNet overhead
	TM1-467	Server shuts down when 30 users are running the same dimension editing job
	TM1-561	Set expression with missing calculated member failed even with using TM1IGNORE_BADTUPLES
	TM1-605	Presence of sandboxes/private objects in a model causes fluctuating performance due to on-demand loading at logon
	TM1-636	Drill-through to external relational database fails often with high availability
	TM1-640	Unhandled exception when calculating over 'Exclude entity'
	TM1-642	Follower crashes from metadata Git issue "DimensionIsBeingUsedByCube"
	TM1-643	ExecuteMdxSetExpression of MDX using Except statement is much slower in Planning Analytics Engine and causes 520 error
	TM1-644	Creating an MDX view with a very large set using customer database is extremely slow
	TM1-645	Complex asymmetric MDX produces incorrect result in Planning Analytics Engine
	TM1-646	MDX error: "Cannot create std::vector larger than m" when adding a view to an exploration
	TM1-649	Slowdown as volume of transaction logs grows in performance tests
	TM1-650	ODBCIS - need better error message, deployment folder is empty
	TM1-653	Creating a calculation with the same ID as an existing member does not produce an error
	TM1-657	Changes to }ClientGroups cube in sandbox context affects user abilities
	TM1-658	Disable automatically adding a user to a database when the user attempts to access the database

Component	ID	Description
	TM1-659	LOLAP - server crash with create (session) set with non-existing cube
	TM1-662	Compact-JSON ODATA context control information does not include key properties
	TM1-664	Memory Exception - Error 500: Moving a context dimension to an axis kills pod due to insufficient memory sizing
