

# IBM Planning Analytics Workspace 2.0.93 - Fix List

Component	APAR	Description
Workspace	<a href="#">PH45231</a>	Moving multiple widgets simultaneously is unstable and results in spacing issues
	<a href="#">PH50428</a>	Planning Analytics Workspace reports cannot be saved to a folder name that includes a special character
	<a href="#">PH52698</a>	Missing characters when typing text in the search bar of a selector
	<a href="#">PH57767</a>	Font and white space padding changes when upgrading to the new Selector visualization
	<a href="#">PH58026</a>	Text boxes and action buttons created in Planning Analytics Workspace 2.0.72 or older display a scroll bar in 2.0.84.
	<a href="#">PH58282</a>	Palette setting for reports is reset during deployment across platforms in Planning Analytics Workspace
	<a href="#">PH58286</a>	Configuration parameter value that is changed via the REST API does not show updated value upon refresh in Planning Analytics Administration
	<a href="#">PH58316</a>	<b>Hide empty data points</b> and <b>Hide hierarchy name</b> option settings are not retained for a Line visualization
	<a href="#">PH58392</a>	Conditional formatting does not appear after sorting
	<a href="#">PH58655</a>	Pressing the Delete button multiple times on the same cell results in error - "Unable to clear cell because your view session has expired. Please refresh the view and try your action again."
	<a href="#">PH58728</a>	Alphabetical sorting no longer works after synchronization
	<a href="#">PH58938</a>	Cannot select the <b>Bursting options: Multiple Excel files</b> option when exporting a view in Chrome browser

Component	APAR	Description
	<u>PH58970</u>	Upgrading a selector list to the new Selector visualization causes the new visualization to bind to the same set for multiple lists
	<u>PH58974</u>	Unable to change roles due to lack of scroll bar in Users and Groups administration
	<u>PH59009</u>	Error from Planning Analytics Workspace report: <code>cc1 runtime error: ranker is in an illegal state</code>
	<u>PH59040</u>	Planning Analytics Workspace distributed install with OpenShift service mesh causes some pods to take an hour or longer to start
	<u>PH59149</u>	Picklist values are formatted incorrectly
	<u>PH59194</u>	Issue creating ForecastResultOutputs cube in Planning Analytics Workspace
	<u>PH59205</u>	Legend text is fully truncated when it should be partially truncated
	<u>PH59215</u>	Element selection resets to top level when updating more than one cell in Planning Analytics Workspace view
	<u>PH59267</u>	A workbook that is imported from a source environment to a target environment cannot be successfully saved after editing in the target environment
	<u>PH59410</u>	Targeted selections against calculated elements is not working in some cases
