

Deploy the connector package on an IBM Security Access Manager federation

You can deploy the connector package using two different methods:

- The local management interface.
- The REST API.

- **Using the local management interface**

1. Log in to the local management interface (LMI).
2. From the top menu, select **Secure Federation -> Partner Templates**.
3. On **Federation Partner Templates**, click **Import**.
4. On **Import Partner Templates** pop-up, click **Browse** to select connector template package file (*.pkg). Click **Import** to import the connector package.
5. After a successful package deployment, verify the connector package version on the **Federation Partner Templates** page.

- **Using the REST API**

1. Copy the connector package on a Security Access Manager appliance VM.
2. Execute the following curl command to deploy the connector package:

```
curl -ki -u admin:admin -X POST -H "Accept:application/json" -H "Content-Type:multipart/form-data" https://<LMI>/mga/partner_templates -F file="@<Connector Package>.pkg"
```

3. Execute the following curl command to verify the deployed connector package:

```
curl -ki -u admin:admin -X GET -H "Accept:application/json" https://<LMI>/mga/partner_templates
```
