

IBM Software Training

IBM WebSphere Enterprise Service Bus

Integration Developer skills for IBM WebSphere Enterprise Service Bus V7.5

Role

The integration developer is responsible for the assembly of application components and services into a complete solution, and the preparation of this solution for thorough testing and subsequent deployment.

The integration developer uses IBM WebSphere Enterprise Service Bus V7.5 to connect and integrate standards-based Web services applications and data. They use IBM Integration Designer V7.5 to develop and test mediation flows and custom mediations.

Assumptions

It is assumed that the individual following this roadmap has basic skills in the following areas:

- Good understanding of business solutions and the business environment
- Knowledge of application components and services, and the ability to implement their efficient collaboration at run time
- Familiarity with the Java programming language and Java EE 5 Web services

Objectives

After completing this training, students should be able to:

- Explain the role of an Enterprise Service Bus (ESB) in a Service Oriented Architecture (SOA)
- Describe the ESB capabilities of WebSphere Enterprise Service Bus V7.5
- Describe the key concepts for development and deployment of mediations: mediation modules, mediation flows, Service Message Objects, and mediation primitives
- Use the tools available within Integration Designer V7.5 that support the development and deployment of integration artifacts to WebSphere Enterprise Service Bus V7.5
- Develop, test and deploy mediations using Integration Designer V7.5
- Develop custom mediation primitives using Integration Designer V7.5
- Integrate WebSphere MQ as a foreign bus in WebSphere ESB
